# PRESS RELEASE

Arcis Corporation is pleased to announce the addition of Dr. Peter Cary to its geophysical team and the planned addition of multicomponent processing to its service offerings.

## **Calgary, Alberta – October 20th, 2011:**

### Press Release

Arcis Corporation is pleased to announce the addition of Dr. Peter Cary to its geophysical team and the planned addition of multicomponent processing to its service offerings.

The addition of Dr. Cary to Arcis' research team represents another milestone in Arcis' plan to become a global leader in seismic processing and in the ongoing development of our proprietary APX™ processing platform. Arcis' President and CEO, Brad Torry, commented that "this addition represents our continued commitment to clients and industry to invest in leading geophysical technology". Torry went on to say that "the future addition of multicomponent seismic processing to our existing arsenal of geophysical processing and reservoir application tools will aid Arcis in delivering enhanced imaging solutions around the globe." Arcis looks forward to releasing more information on its software and services over the coming months.

## **CORPORATE PROFILE**

Arcis is a market leader in the acquisition, marketing and licensing of 2D and 3D seismic data for the western Canadian energy sector, while providing its processing and reservoir technology leadership to the global petroleum industry. Arcis increases the value of seismic data through the application of proprietary data processing and reservoir applications that continue to be well regarded around the world.

For additional information contact Brad Torry.
